

TECNOPLUS N 33

EC FERTILIZER nitrogenous fertilizer NP 32.5 with copper (Cu), manganese (Mn) and zinc (Zn) to mixing obtained.

Composition:

Total nitrogen(N).....	33%
Ammoniacal nitrogen.....	9%
ureic nitrogen.....	23%
Phosphoric anhydride (P ₂ O ₅)water soluble.....	5%
Sulphuric anhydride (SO ₃)water soluble.....	30%
Copper (Cu)	0.05%
Manganese (Mn).....	0.05%
Zinc (Zn)	0.05%

Characteristics:

TECNOPLUS 33 is a mineral water soluble fertilizer high percentage of nitrogen. Ammoniacal and ureic nitrogen combination promotes a gradual absorption aside of plants.

Besides, ammoniacal and ureic nitrogen aren't subjected to washing away. Sulphuric anhydride contained in the product contributes to acidify the soil.

TECNOPLUS 33 is particularly suitable in the restarting vegetative stage and during increasing of the fruits.

Dose and instructions for use - fertirrigation

Vegetables and strawberry: 5-10 Kgs per 1,000 sm of soil every 8/10 day in the first vegetative stages and during increasing stage of fruits.

Citrus, olive, vine, and actinidia: 70-120 Kgs per hectare during increasing stage of fruits.

Pear, apple, peach, apricot, plum and cherry: 70-120 Kgs per hectare during increasing stage of fruits .

Fodder and industrial crops: 50-100 Kgs per hectare in the first vegetative stages.

Ornamental and flowering plants: 5-10 Kgs per 1,000 sm of soil every 8/10 days in the first vegetative stages.

Conf. Kg. 25

TECNOPLUS NPK 25.10.10

EC FERTILIZER NPK fertilizer 25.10.10 with copper (Cu), manganese (Mn) and zinc (Zn) to mixing obtained.

Composition:

Total nitrogen(N).....	25%
Ammoniacal nitrogen.....	8%
Nitric nitrogen.....	3%
Ureic nitrogen.....	14%
Phosphoric anhydride (P ₂ O ₅)water soluble.....	10%
Potassium oxide(K ₂ O) water soluble.....	10%
Copper (Cu)	0.05%
Manganese (Mn).....	0.05%
Zinc (Zn)	0.05%

Characteristics:

TECNOPLUS 25.10.10 is a water soluble fertilizer with a high nitrogen percentage. It is indicated during vegetable phase and during fruits increasing.

Dose and instructions for use - fertirrigation

Vegetables and strawberry: 5-10 Kgs per 1,000 sm of soil every 8/10 day in the first vegetative stages and during increasing stage of fruits.

Citrus, olive, vine, and actinidia: 70-120 Kgs per hectare during increasing stage of fruits.

Pear, apple, peach, apricot, plum and cherry: 70-120 Kgs per hectare during increasing stage of fruits .

Fodder and industrial crops: 50-100 Kgs per hectare in the first vegetative stages.

Ornamental and flowering plants: 5-10 Kgs per 1,000 sm of soil every 8/10 days in the first vegetative stages.
